

Tentative Agenda

Tuesday, Nov. 30, 2021

Opening	
8:00	Welcome (C. Ober)
8:15	Keynote – <i>HPC Software Platform Trends: The Evolution of Trilinos from 2001 to 2026</i> (M. Heroux) (see below)
9:00	20 th Anniversary Celebration
Presentations and Updates from Trilinos Product Areas	
9:30	Framework (J. Willenbring)
	1. <i>Update</i> 2. <i>Talk(s) TBD</i>
10:00	Data Services (K. Devine)
	1. <i>Update</i> 2. <i>How to use Tpetra without UVM</i>
10:30	Discretizations (M. Perego)
	1. <i>Update</i> (M. Perego) 2. <i>Introduction to Krino</i> (D. Noble)
11:00	Linear Solvers (S. Rajamanickam)
	1. <i>Update</i> (S. Rajamanickam) 2. <i>New Architecture Support HIP - SAKE</i> (B. Kelley, L. Berger-Vergiat, I. Yamazaki) 3. <i>Mixed Precision</i> (J. Loe, S. Rajamanickam)
11:45	Nonlinear Analysis (R. Pawlowski)
	1. <i>Update</i>
12:00	Adjourn

Wednesday, Dec. 1, 2021

Applications Session	
8:00	Welcome (C. Ober)
8:15	<i>SPARC Title TBD</i> (T. Fisher, ...)
8:40	<i>EMPIRE Title TBD</i> (R. Pawlowski, K. Cartwright, ...)
9:05	<i>GEMMA Title TBD</i> (J. Kotulski, V. Dang, W. Langston, ...)
9:30	<i>Sierra/Thermal Fluids Title TBD</i> (J. Clausen, ...)
9:55	Break
10:10	<i>Developing a GPU-enabled 3D Discontinuous Petrov-Galerkin Toolkit: Experiences with Intrepid2</i> (Julia Plews)
10:35	<i>Drekar Title TBD</i> (M. Crockatt, J. Shadid, R. Pawlowski, ...)
11:00	<i>Amanzi-ATS/Exasheds</i> (David Moulton (LANL) and Ethan Coon (ORNL))
11:25	<i>FROSch Icesheet Title TBD</i> (A. Heinlein and I. Yamazaki)
11:50	Adjourn

Thursday, Dec. 2, 2021

Developers Session	
8:00	Welcome (C. Ober)
8:15	<i>Overview of New Trilinos Testing Infrastructure</i> (E. Harvey)
8:30	<i>PR Testing and the 'Terrible Diagram'</i> (W. McLendon)
8:45	<i>TriBits Modernization</i> (R. Bartlett)
9:15	<i>Usability Title TBD</i> (A. Fate)
9:45	<i>Automated Performance Testing and Tuning</i> (J. Watkins)
10:15	Break
Developer Driven Discussions	
10:30	Selection of Topics
10:45	Breakout Discussions
11:15	Full Group Discussion
12:00	Adjourn

Keynote: Mike Heroux

HPC Software Platform Trends: The Evolution of Trilinos from 2001 to 2026

The Trilinos Project started in 2001 as a software platform to support the collaborative development of inter-dependent scientific libraries using a shared software and communications infrastructure. In its early days, Trilinos used CVS, Bugzilla, Mailman, and Autotools to support developers and users. The Trilinos community could count on file system backups, training, mail lists for questions and announcements, and more. Trilinos also provided a "New Package" package as a template for rapid start-up of new packages, or integration of existing external packages.

Since those early days, the broader software community has increasingly provided new and improved tools and processes that superseded what Trilinos initially provided, and the Trilinos Project has evolved to adjust. More change and opportunities are on the horizon.

In this presentation, we discuss the history of scientific software platforms, illustrated through the evolution of Trilinos. We also use this history and current trends to project some of the next possibilities for Trilinos to continue adapting and providing value to its stakeholder communities.
